

Seanergy is the international forum dedicated to MRE (Marine Renewable Energies) and Offshore Wind, organised by Bluesign. In partnership with the Pays de la Loire Region, Nantes Métropole and Carene, this 2020 edition will be held from June 9th to 12th in Nantes & Saint-Nazaire, France.

This annual *rendez-vous* aims to promote the marine renewable energy industry - fixed and floating wind turbines, tidal, floating solar, wave energy, marine thermal energy - and to strengthen synergies between all the players in this sector, in order to accelerate its structuring and promote its development on a worldwide level.

Each year, Seanergy gathers more than **200 exhibitors** and **2500 international actors of the MRE industry** (politics, ordering institutions (energy operators and industrials), technological experts, NGOs, start-ups, researchers, investors, subcontractors...) around an exhibition area, industrial and technical conferences, business meetings, pitches and workshops on specific topics linked with the blue growth economy and industrial sites' visits.

By stimulating collaboration Seanergy has the ambition to make MRE, the energies of tomorrow, to support the energy transition.
